

**HOT TICKET**

# Maths on the Move

*20 July, with Adam Boddison*

**What's the event?**

A talk that explores the mathematics used in road travel.

**Why are you involved?**

I am interested in making maths accessible to more people by helping them see the relevance it has to their everyday lives. It's an area of maths I like to refer to as "reality maths".

**Why should we come?**

Most people use the roads, and it will be interesting and informative for them to get an

insight into what is happening around them. Understanding the reasons behind certain speed limits might help make the roads a little safer.

**What questions should we ask?**

When you are in queuing traffic on a motorway, is it better to stay in a particular lane or to change lanes? And is it true that you can travel so fast past a speed camera that you will not be caught? ●
